ULTILINK

RAPID ATTACHMENT MODULAR LINKING SYSTEM

ULTICLIP ENGINEERED

The UltiLink is a modular linking system that allows for swift multi-angled attachment, removal, and reattachment of molle gear, sheaths, mag carriers, and other items. The UltiLink's modular system makes it easy to transfer items between molle, duty vests, belts, packs, and from person to person.

The TuckWing and Crux Concealment System are modular, customizable holster attachments. The TuckWing is designed to work specifically with our UltiTuck clip while the Crux works with vertically mounted clips like our Ulticlip3+, Slim 3.3, and XL. The TuckWing and Crux can be used ambidextrously to create leverage, pushing the grip of the firearm closer to the user's body to offer enhanced concealment by reducing the "printing" of the firearm.

Ulticlip offers patented holster and sheath clips along with other carry solutions that allow you to more securely, conveniently, and confidently carry your gear. Our clips offer over 10 times the retention of standard clips and can be used with or without a belt. Ulticlip products are proudly designed, tested, and manufactured in the USA and sold through a worldwide network of authorized retailers.
